

UNIFIED MECHANICS · THE CORPUS

The Corpus Atlas

What is here, which file governs, which route to read it by, and where every result and every open question lives. Read this first. It is a map, not an argument, and it is short on purpose.

JOSEPH SHIELDS

CORPUS EDITION · 2026 · FIFTH PRINTING

ONE

What this corpus claims to be

A framework is complete when it settles what it says it settles, states every condition governing those settlements, locates every full derivation, exposes every remaining obligation with the reason it stands, and makes the chain reproducible enough that a disagreement has to be about the work rather than about the filing. That is the standard this edition is built to. It is not the standard of answering everything, which nothing meets.

On that standard the argument is closed. That is a checkable statement rather than a boast: the dependency graph in the Formal Register shows that no result in the corpus depends on any open obligation. The obligations are terminal. They are a forward work programme, not holes holding anything up. A reader who reaches the open list after watching superposition, the Lorentzian signature and the gauge algebra get derived should read it that way.

What the corpus does not claim: that its physical readings are correct, that its carrier is the right carrier, or that agreement with a measurement is a derivation of it. Those distinctions are carried by the grades and the grades are never quietly mixed.

TWO

The canonical objects

Four books, one casebook among them, and everything else is support. These are the files that govern. Anything not on this list is either a derivation behind one of them, a record supporting one of them, or provenance.

A A World of Distinctions The continuous argument, twenty-seven movements, beginning to end. This is the book. Read it first and read it straight through.

B1 Universopedia, The Observational Standard The observational contract: what a record is, what may honestly be said about a measured system, and where established science ends and the framework's added layer begins.

B2 Universopedia, Systems of Interpretation The casebook. The framework thrown at real systems, recording where it grips and where it slides off. The negative screens are kept deliberately and reproduce; a framework reporting only its successes would be worth less than this one.

C Unified Mechanics, The Formal Register The audit surface. One notation, numbered commitments, definitions and results, the numerical register in closed form, the dependency graph with its complete edge ledger, and the proof obligations. For checking rather than reading.

B Universopedia, Combined Reading Edition B1 and B2 bound together for continuous reading. It is a convenience, it is named as one, and it governs nothing that B1 and B2 do not.

THREE

Authority, when two documents disagree

In order. Each line governs everything below it.

1	the Core Freeze Manifest of the current printing	which objects constitute it
2	the Formal Register	identifiers, grades, dependencies
3	the core books	their own narrative and observational roles
4	the Papers as Issued, read through the Index	the full derivations
5	the Reproducibility layer	computational evidence and certificates
6	the Archive	provenance only; governs nothing

Historical titles are preserved for provenance and do not determine current authority. Paper 13 was issued as Monograph II and is a technical source paper, not a second volume. The Register was labelled Volume III in earlier printings and that label is retired. Where an issued paper cites a movement by number, read it through the concordance in Part Nine of the Register, because the Fourth Printing inserted four movements and shifted everything from the tenth onward.

FOUR

Four routes through

The narrative route A, start to finish. Nothing else. This is what the corpus is for and it works on its own.

The audit route C first and last. Check the notation, the commitments, the results with their conditions, then the edge ledger, then the obligations. You can verify the chain without reading the story at all.

The observational route B1, then B2, then the application notes in the Reproducibility layer. What the framework is allowed to say, then what happened when it said it.

The computational route o4 REPRODUCIBILITY, run_all.py. One command regenerates every certificate in the corpus from the included code and data, and writes a manifest recording the environment, the input hashes and the output hashes. If a number does not regenerate, it is not frozen.

FIVE

The movement map

Twenty-seven movements, one continuous line of reasoning. The technical source behind each family is named on the right.

1	The one move		the opening
2	What a thing has to do to be a system	T1	
3	The loop that starts everything		
4	The golden proportion	T2 T3 T4	$\leftarrow \phi^2 = \phi + 1$
5	The three weights	T5	
6	The field		
7	The traversal price	T7	Paper 18
8	The ladder		
9	The carrier	T8 T9	Papers 08 09
10	The descent	T13 T14	Paper 20
11	What survives	T15 T16 T29	Paper 21
12	The shape of the world	T17 T18	Papers 16 17 19
13	The record of the whole		
14	The equation as a finished journey		
15	The action and its double		Paper 13
16	The container		
17	The unresolved world	T19 T20	Paper 13
18	The bookkeeping of chance	T21 T22 T23	Papers 13 15
19	The carrying of sameness	T24	Paper 20
20	The one operator	T25	Papers 20 21
21	The extended traversal		
22	The watcher's machinery		Paper 16
23	The ocean	T27	
24	The architecture of one world		
25	The luminous wound		
26	The wound that could not forget	T26 T28	Paper 18
27	What it claims, and what it leaves open		

SIX

Where every result and every obligation lives

Full detail is in Parts Four, Seven and Eight of the Formal Register. This is the pointer.

T1 to T5	Monograph, Movements Two, Four, Five	
T6 T27 T28	Paper 18	
T7	Monograph Movement Seven; exponent from T10	
T8 T9	Monograph Movement Nine; Papers 08 09	
T10 T11	Paper 20 Section Four	
T12	Reproducibility, e8_golden_tests.py	
T13 T14	Paper 20; Movement Ten	
T15 T16	Monograph Movement Eleven	
T17 T18	Monograph Movement Twelve; Paper 19	
T19 to T23	Monograph Movements Seventeen and Eighteen; Papers 13 15	
T24 T25	Monograph Movements Nineteen and Twenty; Paper 20	
T26	Monograph Movement Twenty-Six	
T29 to T32	Paper 21	new in this printing
T33 to T39	Papers 22 to 26	new after this printing
01	the reduction is forced to be the average	DISCHARGED by T37
02	the spatial modes number three	DISCHARGED, unconditional
03	gauge, matter, charges, families, anomalies	DISCHARGED for content; the Yukawa hierarchy is not
04	a complete carrier closure exists	DISCHARGED for existence
05	the expansion residual	OPEN; consistency passed
06	the audited pipeline count	OPEN, empirical
07	a live reading of quantised retention	OPEN, the condition of defeat

EXPOSURE the three families are degenerate at this order, which is wrong

SEVEN

The grades, once

PROVED Follows from stated definitions or assumptions.

CONDITIONAL Follows once a named condition is granted. The condition is in the statement, never in a footnote.

PROPOSED A physical reading offered for calculation and falsification.

POSTULATE A starting commitment.

OPEN Formulable but not settled. Every open item in this corpus also states why it is open.

DISSOLVED Shown to be a convention or a category error rather than a physical unknown.

Keeping these apart is the difference between a framework and a mood. They are shown as words rather than as colours, so they survive being printed in grey.

EIGHT

What reproduces, and how

From o4 REPRODUCIBILITY, one command:

```
python run_all.py
```

This runs fourteen scripts, regenerates every certificate, and writes certificates/run_manifest.json recording the command, the Python and package versions, the platform, every input hash and every output hash, and pass or fail per step. It exits nonzero if anything fails, so it can gate a release. requirements.txt pins the environment and data_manifest.csv declares every data source with its licence and its use.

The dependency graph is shipped as nodes.csv and dependencies.csv, and every edge carries the phrase from the Register that licenses it, so the graph can be checked line by line against the text rather than taken on trust. The Fourth Printing stated node and edge counts that were not reproducible because this source was never included, and that is exactly the failure this layer exists to prevent.

NINE

The Archive, and what it is not

90 ARCHIVE holds superseded printings byte-exact, the original source materials, and one folder named Unreproducible outputs. Nothing under Archive governs a current claim, and nothing there should appear on a current reading route without a provenance note.

The Unreproducible outputs folder holds one file: a frozen numerical result from the Fourth Printing whose generating script was never included and which no candidate estimator reproduces from the included data. It was retired rather than left standing, and it is kept rather than deleted, because a corpus that quietly loses its embarrassments is not keeping a record. Its replacement is generated by a script in the release and names its estimator in the file, so it can never again stand for two different things.
